

The Lawrence School, Sanawar

Nature Club Report- Birdhouses and picket fences!!

The founder's Term began with much enthusiasm for the Nature Club and IAYP students. We tried our hand at something new- A workshop to build birdhouses and picket fences to put up around our in-house project-'The Leisure Garden' and elsewhere on the campus.

So why the effort? All this while we would give our requirements for the club to be built by the Engineering Department. So this time we thought of trying our hand at carpentry and work shoulder to shoulder with the skilled carpenters in the Engineering Department. They taught us all there is to know about sawing, cutting, drilling, nailing and painting to accomplish our task.

The other green initiatives of the Nature Club include tree plantation. In the Founder's Term, the Nature Club took up tree plantation in two stages. Starting with planting of flowering plants, bulbs and trees in and around Leisure Garden on 6th August 2016 Hiroshima Day, this was followed by planting hedgers and flowering plants on the road below the DHM's residence 20th August 2016. It's been three years since we took on the restoration of Leisure Garden in these three years we have done landscaping, added a birdbath and this year we added the picket fences and birdhouse made by ourselves.
