

# **The Lawrence School, Sanawar®**

## **EXPLORING SCHOOL ENVIRONMENT**

### **AN EXPERIENTIAL LEARNING ACTIVITY IN L-IV A**

#### **CAMPUS AS CURRICULUM**

On 15<sup>th</sup> February 2025, a group of L-IV students moved out of the four walls of their classroom to study a topic on components of environment as part of their geography syllabus. Idea was to explore the school environment around them, make a list of what they see around them and classify everything in the categories like natural, human, human made, biotic and abiotic components. They took a small round around bird wood, pausing at a few places and curiously observing everything around them. This is followed by a class discussion on the topic. It was real fun to learn by having a hand on experience, using their immediate environment of school campus as curriculum. Students are looking forward to have more such experiences of meaningful learning.
